Professional Summary

Product-focused **AI Application Developer and Full-Stack Engineer**, currently driving enterprise AI integrations at **Techwaukee** by deploying autonomous AI agents, SLMs, and Agentic RAG systems. Backed by solid backend engineering experience at **Prudent AI** and applied AI/security research at **IIT Madras (CYSTAR Lab)**. Proven track record of independently designing and shipping complex, production-grade full-stack platforms—engineering responsive Next.js/React frontends with modern state management, high-concurrency Node.js/FastAPI microservices, ACID-compliant transactional workflows, and multi-tenant architectures across PostgreSQL and MongoDB. Adept at bridging deterministic full-stack business logic with multi-agent frameworks (LangGraph) and hybrid retrieval pipelines to deliver resilient, scalable, zero-hallucination applications.

Technical Skills

Languages:	Python, C/C++, HTML5/CSS3, SQL, TypeScript, JavaScript (ES6+), Java
AI, LLM & Agents:	Agentic RAG, LangChain, LangGraph, Multi-Agent Systems, SLMs, LLMs (Llama 3.3, Qwen 2.5, DeepSeek, Mistral), NVIDIA NIM/Models, Hugging Face, Fine-Tuning (LoRA/PEFT), Prompt Engineering, Hallucination Guards, PyTorch, TensorFlow, Scikit-learn, Vector DBs (FAISS, Qdrant, ChromaDB), Hybrid Search (BM25), Embeddings (BGE, Nomic, OpenAI), vLLM, Ollama
Backend & Systems:	Node.js, Express, FastAPI, Django, Flask, RESTful APIs, GraphQL, Microservices, Async I/O, WebSockets (Socket.IO), SSE, Event-Driven Architecture, Celery, JWT, OAuth2, RBAC, Webhooks
Frontend & Full-Stack:	Next.js (App Router), React, Redux Toolkit, Zustand, TanStack Query, Tailwind CSS, Monaco Editor, Framer Motion, Radix UI, Responsive UI/UX, State Machines
Databases & Caching:	PostgreSQL, MongoDB, Microsoft SQL Server (MSSQL), MySQL, Supabase, Redis (Caching/Rate-Limiting), Prisma ORM, Mongoose ODM, In-Memory DBs
Cloud, DevOps & Infra:	AWS (EC2, S3, IAM), Docker, Docker Compose, CI/CD Pipelines, GitHub Actions, Vercel, Render, Hugging Face Spaces, Linux/Unix, Windows Server Hosting, Nginx
Testing & Tools:	Git, GitHub, Bitbucket, Jira, Atlassian Suite, Agile/Scrum, Pytest, Jest, Supertest, Postman, System Design
Cybersecurity & Net:	Threat Modeling, Static Code Analysis (Tree-sitter), Vulnerability Assessment, Penetration Testing, Wireshark, Burp Suite, OWASP Top 10, Network Protocols

Professional Experience

Techwaukee – Go Recruit AI, Chennai <i>AI Application Developer</i>	Jun 2026 – Present <i>Chennai, India</i>
- Spearheading the core AI architectural transformation by integrating Small Language Models (SLMs) and multi-source Agentic RAG pipelines into an existing enterprise recruitment platform. - Building autonomous, production-ready AI Agents, Conversational Assistants, and Chatbots to automate complex candidate screening, semantic talent discovery, and job-fit evaluation. - Fine-tuning and optimizing inference workflows using Qwen 2.5, Llama 3.3, and NVIDIA foundation models for zero-latency, high-accuracy classification and extraction tasks.	
Prudent AI, Chennai <i>Backend Engineer</i>	Dec 2025 – May 2026 <i>Chennai, India</i>
- Architected scalable backend services using FastAPI and Django for automated data extraction, optimizing REST APIs and high-volume database queries to significantly lower endpoint latency. - Implemented test automation suites using Pytest and Unittest with mock fixtures, ensuring > 90% code coverage. - Managed end-to-end development workflows across the Atlassian suite (Jira, Bitbucket), resolving over 50+ client tickets and issue escalations. - Streamlined deployment and local development environments using Docker to ensure consistent service delivery.	

- Conducted security research under Prof. Chester Rebeiro on secure system architectures, static code vulnerability parsing, and threat modeling for intelligent applications.
- Engineered an AI-driven educational platform leveraging NLP-based semantic chunking to transform unformatted technical documents into adaptive evaluation models.

Key Projects

FinPilot – Autonomous AI Business Finance OS

[\[Live Demo\]](#) [\[GitHub\]](#)*Next.js, Node.js, Express 5, TypeScript, MongoDB, Groq (Llama 3.3 70B), Zustand, TanStack Query*

- Engineered a multi-tenant B2B SaaS platform calculating real-time P&L, runway, and an 8-factor financial health score with zero arithmetic delegation to the LLM, eliminating hallucinations.
- Built a strictly grounded **AI CFO layer** using 13 deterministic read-only aggregations and strict JSON grounding context.
- Implemented multi-tier cascading transactions for invoice settlement, auto-ledger balancing, and 6-role granular RBAC.

Dr. Doom – AIML Medical Consultation Assistant

[\[Live Demo\]](#) [\[GitHub\]](#)*FastAPI, React, TypeScript, PostgreSQL, FAISS, BM25, Llama 3.3 70B, Docker*

- Developed an AI medical consultation pipeline combining hybrid dense/sparse retrieval (FAISS + BM25) over NIH knowledge bases.
- Integrated a custom sentence-level **GroundingValidator** to sanitize LLM clinical responses and eliminate hallucinations.

AI DSA Mentor Platform – Real-Time Intelligent Compiler

[\[Live Demo\]](#) [\[GitHub\]](#)*Next.js 15, FastAPI, LangGraph, Tree-sitter, Socket.IO, Monaco Editor, Express 4, Prisma*

- Built an interactive IDE featuring a deterministic signal engine that parses ASTs and infers Big-O complexity on keystrokes across 12 languages, reducing LLM calls by ~85% via a proactive Trigger Policy.
- Integrated a 7-agent **LangGraph mentor** protected by a runtime Response Guard with token-fingerprinting to prevent solution leaks.

Roamly – P2P Vehicle Rental Marketplace

[\[Live Demo\]](#) [\[GitHub\]](#)*Next.js 16, TypeScript, PostgreSQL, Prisma, Tailwind CSS, Render Blueprint*

- Built a full-stack vehicle rental platform with a 10-state booking machine and ACID transactions to eliminate double bookings.
- Created an isomorphic pricing engine for zero-latency live quotes and automated excess mileage and deposit settlements.

AI-Powered Candidate Search & RAG Recruitment Platform

[\[Live Demo\]](#) [\[GitHub\]](#)*FastAPI, React, TypeScript, PostgreSQL, Prisma, Qdrant, BGE Embeddings, DeepSeek, Ollama*

- Built an enterprise AI talent acquisition suite featuring automatic multi-format resume parsing (PyMuPDF/OCR) and deterministic job-fit ranking across 7 weighted sub-scores.
- Implemented an agentic RAG assistant with conversational memory, dynamic query reformulation, and pool-wide analytics aggregation.

Education

B.S. Abdur Rahman Crescent Institute of Science and Technology, Chennai**2022 – 2026**

Bachelor of Technology in Computer Science Engineering

CGPA: 8.7 / 10.0

Achievements & Certifications

- **1st Position at Hackathon** – Secured 1st position at university level hackathon by making an application to prevent from any kind of ragging in campus.
- **1st Position at Project Expo** – University Project Expo for designing and presenting an AI-based mental health-care diagnostic platform.
- **Google Certified Professional Certificate** in Cybersecurity.
- **IIT Madras CYSTAR Research Fellowship Certificate** in Secure Systems and Applied AI.
